## Question 9 (7 marks)

Consider the function $f(x)$. The graph of its derivative, $y=f^{\prime}(x)$, is shown below.
The graph intersects the $x$-axis at the origin $(O)$ and at $x=b$. The point $A$, where $x=a$, is a local maximum of the graph of $y=f^{\prime}(x)$.

(a) Complete the table below by indicating whether $f^{\prime}(x)$ and $f^{\prime \prime}(x)$ are positive $(+)$, negative $(-)$, or zero (0) when $x=a$ and when $x=b$.

| $x$ | $a$ | $b$ |
| :---: | :---: | :---: |
| $f^{\prime}(x)$ |  |  |
|  |  |  |
| $f^{\prime \prime}(x)$ |  |  |

(b) On the axes below, sketch a possible graph of $y=f(x)$ that passes through the origin. Clearly show the shape of the graph in the vicinities of the origin, $x=a$, and $x=b$.
