

Year 12 Chemistry
Quick Quiz: Using and Controlling Reactions

1.

2.

(a)

	N ₂	H ₂	NH ₃
<i>initial</i>	2	4	0
<i>final</i>	1	1	2
<i>change</i>	-1	-3	+2

(b)

3. The forward and backward reactions are occurring at equal rate (the concentrations of reactants and products have ceased to change with time).

$$4. \quad M_{\text{CH}_4} = 12.01 + (1.008 \times 4) = 16.052 \text{ g mol}^{-1}$$

$$\Delta H = 891 \text{ kJ mol}^{-1}$$

$$\therefore 891 \div M = 55 \text{ kJ g}^{-1}$$

$$E = 4.0 \times 55 = 222 \text{ kJ} = 2.22 \times 10^5 \text{ J}$$

$$E = mc_p \Delta T$$

$$\therefore m = \frac{E}{c_p \Delta T} = \frac{2.22 \times 10^5}{4.18 \times 40} = 1300 \text{ g}$$

$$\therefore 1.3 \text{ L}$$
